

Bioswale Mix

AGRISERVICE Quality Parameters

Product Description and Production Benefits Application

- Bioswale Mix is an evenly mixed composition of washed sand, sandy loam topsoil and Humic Compost.
- Particle size is 3/8 inch minus.
- Moisture content at the time of marketing is approximately 10%.
- Bioswale has the following parameters:
 - Sand 50% to 60%
 - Topsoil 20% to 30%
 - Compost 20% to 30%
- Permeability rate and agricultural suitability test results are available on request.
- One cubic yard of Bioswale Mix weighs approximately 2,000-2,200 pounds.

Benefits

- Bioswale Mix provides good drainage and water infiltration to remove silt and pollution from surface runoff water.
- Topsoil and Humic Compost support healthy plant growth for vegetated swales.
- Humic Compost promotes soil conditioning and helps establish active microbial populations to assist plant health and purification of polluted runoff water.

Application

- Use in a swaled drainage course as specified by the project landscape architect or engineer.
