

70/30 Topsoil

AGRISERVICE Quality Parameters

Product Description and Production Benefits Application

- 70/30 Topsoil is an evenly mixed composition of 70% mineral soil and 30% Humic Compost.
- Particle size is 3/8 inch minus.
- Moisture content at the time of marketing is approximately 10%.
- Agricultural suitability test results are available on request.
- One cubic yard of 70/30 Topsoil weighs approximately 1,800-2,000 pounds.

Benefits

- 70/30 Topsoil provides a good sandy loam soil base that is mixed with high-quality organics. This combination provides excellent soil for landscape augmentation.
- 70/30 Topsoil can be used to:
 - Raise the grade level
 - Fill the top 12 inches of planter beds with 70/30 Topsoil
 - Backfill when planting trees or shrubs
 - Replace poor quality native soil

Application

- Mix into the existing soil to prevent soil layering.
- Three cubic yards will cover 1,000 square feet with a one inch deep layer.
